PROJECTS

Project 1	Medical Inventory Management System (Duration 2024-25) The Aim is To Develop python based application for managing medicine Records efficiently in medical store. Medicine records are stored in a Dictionaries, Easily Manageable Program Functions. The Results were All Operations Implemented Tested Successfully with Accurate Resources. Because Basically Medical Stores are Manage their Medicine Records which are Expired , How Many Stock are Available in the Stores and Which Medicine not Available then they will Manage that Medicine on the Time .
Project 2	Exam Hall Seating Allocation System (Duration 2025-2026) The Aim Is To Design And Develop a computerized Exam Hall Seating Allocation System that Automates seat Distribution and improves efficiency in Examination Management. The System Stores and manages student details required for exam seating, Exam details and hall information are recorded and maintained in the system, And The Program Automatically allocates seats to students based on available hall capacity. All records stored in Structured format which allows easy retrieval and modification. The application was tested to ensure that all modules work correctly and produce accurate results. Seat allocation was often done manually, which could lead to errors and confusion. Thus, the system improves the efficiency, accuracy , and reliability of exam hall management.
